

A Blended Approach to Training and Testing

The aviation industry needs creative solutions to the challenges posed by the ICAO Language Proficiency Requirements. A “one-size fits all” approach is unhelpful because of the number of personnel who need to be tested and trained, especially given the shift patterns of pilots and controllers and the number of locations they work in.

Mayflower College has developed a blended approach including computer-based benchmark testing, the face-to-face Test of English for Aviation (TEA), classroom-based language courses for pilots and controllers and internet-based self-study programmes. Mayflower College is committed to working with its clients to find the most effective solution to their needs.
